

Pet Dog Leg Protector Hip Auxiliary Correction Belt

Product Features/Functions:

1. The dog's thigh and hip joint protector is made of neoprene, which feels delicate, soft and elastic
2. The leg support sheath has a shockproof effect, and it can be worn after injury or surgery to effectively prevent secondary injuries when the dog is injured
3. Relieves pain from cruciate ligament injuries, osteoarthritis and kneecap problems
4. Helps treat the loss of stability caused by arthritis.
5. Suitable for small, medium and large dogs with short legs.

use:

1. Great for wrapping leg wounds. Just wrap the wound and wrap it with our support frame dog leg wrap to prevent secondary infection of the wound caused by dog licking or touching water.
2. Your dog may suffer secondary injuries from a knee injury, which requires a dog leg guard.
3. Provide maximum support and stability. Helps with: Stable arthritis after fatigue injury Supports any postoperative strain
4. Pay attention to remove the sheath 2-3 times a day, let the legs breathe at night

DOG HIP BRACE SUPPORT

Helps prevent and treat hind leg crossing in your dog.

The Cross-Assist may be adjusted to fit the width of your pets' legs and is a training tool for those pets who cross their hind legs. The corrective training tool allows your pet to move naturally while keeping the hind legs apart at the same time, retraining your dog to walk correctly.
